

creating better environments

Several thousand square metres of Marmoleum were chosen by the architect for installation in an eco-friendly neighbourhood. With its durability and solidity, Marmoleum offers considerable resistance in heavy-traffic areas. It also respects the environment with its natural, biosourced materials. Flotex was preferred for the refectory on account of its acoustic performances, besides ensuring a pleasant lunch break.

Location	Besançon, France
General Contractor Group 1000	
Architect	Brigitte Métra
Installation by	Group 1000
Photographer	INFRA
