

The Spray method

Mechanical floor care, using a rotary machine

In most situations the Spray-method is the best option. Spray-cleaning will keep the floor in optimal condition and inhibit the adhesion of dirt. The Spray-method provides a dry and hygienic environment

After installation

- . Clean the floor with **Cleaner** and a mop
- . Pick up dirty water with a wiper and mop or a water vac
- . Rinse with clean water and a mop
- . Allow the floor to dry

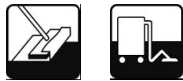

50 ml
Forbo Cleaner
- 10 l water

- When intensive traffic is expected:
- . Apply a full **Spray**-film with an applicator
 - . Buff the **Spray**-film with a rotary machine and a buffing pad

Forbo Spray
- water, 1:1

Regular cleaning

- . Wipe with a dust mop and dust cloth, or vacuum the floor
- . Remove spots with a damp mop

Periodic cleaning

- . Spray clean with a rotary machine and a buffing pad, use **Spray** where necessary

Forbo Spray -
water, 1:1

Occasional maintenance

- . Scrub with **Cleaner**, a rotary machine and a scrub pad
- . Pick up dirty water with a wiper and mop or a water vac
- . Rinse with clean water and a mop
- . Allow the floor to dry

250 ml
Forbo Cleaner
- 10 l water

- When intensive traffic is expected:
- . Apply a full **Spray**-film with an applicator
 - . Buff the **Spray**-film with a rotary machine and a buffing pad

Forbo Spray
- water, 1:1
